

SYLLABUS / FIȘA DISCIPLINEI

1. Information on the study programme / Date despre programul de studii

1.1. Institution / Instituția de învățământ superior	Universitatea de Vest din Timișoara
1.2. Faculty / Facultatea	Matematică și Informatică
1.3. Department / Departamentul	Computer Science (Informatică)
1.4. Study program field	Computer Science (Informatică)
1.5. Study cycle/ Ciclul de studii	Bachelor / licență
1.6. Study programme / Programul de studii / calificarea*	Computer Science / Informatică în limba engleză / Database administration / <i>Administrator baze de date - 252101; Computer network administration / Administrator de rețea de calculatoare - 252301; Analyst / Analist - 251201; Research assistant in computer science / Asistent de cercetare în informatică - 214918; Teacher in secondary schools / Profesor în învățământul gimnazial - 233002; Programmer / Programator - 251202; Software systems designers / Proiectant sisteme informatice - 251101</i>

2. Information on the course / Date despre disciplină

2.1. Title of the course / Denumirea disciplinei	Formal Languages and Automata Theory						
2.2. Teacher in charge of the course / Titularul activităților de curs	Madalina Erascu						
2.3. Teacher in charge of the seminar / Titularul activităților de seminar	Madalina Erascu						
2.4. Study year / Anul de studii	1	2.5. Semester / Semestrul	2	2.6. Examination type / Tipul de evaluare: E(xam)/C(olloquim)	E	2.7. Course type / Regimul disciplinei: M(andatory)/ E(lective)/ F(acultative)	M

3. Estimated study time (number of hours per semester) /Timpul total estimat (ore pe semestru al activităților didactice)

3.1. Attendance hours per week / Număr de ore pe săptămână	3	out of which / din care: 3.2 lecture/ curs	2	3.3. seminar/laborator	1
3.4. Attendance hours per semester / Total ore din planul de învățământ	42	out of which: 3.5 lecture / curs	28	3.6. seminar/laborator	14
Distribution of the allocated amount of time / Distribuția fondului de timp*					hours/ ore
Individual study /Studiu după manual, suport de curs, bibliografie și notițe					50
Supplementary documentation at library or using electronic repositories / Documentare suplimentară în bibliotecă, pe platformele electronice de specialitate					30
Preparing for laboratories, homework, reports etc. /Pregătire seminarii/laboratoare, teme, referate,					30

portofolii și eseuri	
Exams / Examinări	2
Tutoring / Tutorat	2
3.7. Total number of hours of individual study / Total ore studiu individual	80
3.8. Total number of hours per semester / Total ore pe semestru	160
3.9. Number of credits (ECTS) / Număr de credite	6

4. Prerequisites (if it is the case) / Precondiții (acolo unde e cazul)

4.1. curriculum / de curriculum	Not the case
4.2. skills / de competențe	Basic mathematical knowledge, problem solving and programming skills

5. Requirements (if it is the case) / Condiții (acolo unde e cazul)

5.1. for the lecture / de desfășurare a cursului	Classroom with blackboard and video projector
5.2. for the seminar, laboratory / de desfășurare a seminarului/laboratorului	Classroom with blackboard, computers and video projector

6. Acquired skills / Competențe specifice acumulate

Professional skills / Competențe profesionale	Introduce concepts in automata theory and theory of computation: <ul style="list-style-type: none"> Identify different formal language classes and their relationships Design grammars and recognizers for different formal languages Prove or disprove theorems in automata theory using their properties Determine the decidability and intractability of computational problems
Transversal skills / Competențe transversale	The ability to communicate knowledge about different notions from formal languages and automata theory and their usage.

7. Objectives of the course / Obiectivele disciplinei (reieșind din grila competențelor specifice acumulate)

7.1. General objective / Obiectivul general al disciplinei	Knowledge and understanding of basic notions from the formal languages theory: grammars and automata
7.2. Specific objectives / Obiectivele specifice	<i>Knowledge objectives:</i> (1) Identify different formal language classes and their relationships (2) Design grammars and recognizers for different formal languages <i>Habilitation objectives:</i> (1) Prove or disprove theorems in

	automata theory using its properties (2) Determine the decidability and intractability of computational problems <i>Attitudinal objectives:</i> (1) to argue the importance of formal languages, automata, decidability results to an IT specialist.
--	---

8. Content / Conținuturi*

8.1. Lecture / Curs	Teaching strategies / Metode de predare	Remarks, details / Observații
C1. (2h) Course overview. Introduction to Automata Theory & Formal Languages	Lecture, conversation, illustration	References: 1. M. Erascu - slides 2. Introduction to automata theory, languages and computation - Authors: JE Hopcroft, R Motwani and JD Ullman, Publisher: Addison Wesley/Pearson; 2 nd Edition
C2. (2h) Finite Automata	Lecture, conversation, illustration	Same as above
C3. (2h) Regular Expressions	Lecture, conversation, illustration	Same as above
C4. (2h) Regular Language Properties	Lecture, conversation, illustration	Same as above
C5. (2h) Midterm I	Lecture, conversation, illustration	Same as above
C6. (2h) Context Free Grammars and Languages	Lecture, conversation, illustration	Same as above
C7. (2h) Pushdown Automata	Lecture, conversation, illustration	Same as above
C8-9. (4h) Context-Free Language Properties	Lecture, conversation, illustration	Same as above
C10. (2h) Midterm II	Lecture, conversation, illustration	Same as above
C11. (2h) Turing Machines	Lecture, conversation, illustration	Same as above
C12-C13. (4h) Undecidability	Lecture, conversation, illustration	Same as above
C14. (2h) Course & Finals Review	Lecture, conversation, illustration	Same as above

Recommended bibliography / Bibliografie:

[1] Introduction to automata theory, languages and computation - Authors: JE Hopcroft, R Motwani and JD Ullman, Publisher: Addison Wesley/Pearson; 2nd Edition

8.2. Seminar, lab / Seminar, laborator	Teaching/learning strategies / Metode de predare/ învățare	Remarks, details / Observații
L1. (2h) Design of Finite Automaton: deterministic finite automaton (DFA) or nondeterministic finite automaton (NFA)	Questioning, dialogue, collaborative learning	Based on the notions presented in the lecture, the students will be able to access the homework from the course website. They have to prepare it. It will then will be discussed in the class.
L2. (2h) Construction of regular expressions	Same as above	Same as above
L3. (2h) Usage of Pumping lemma	Same as above	Same as above
L4-5. (4h) Design of Context Free Grammars	Same as above	Same as above
L6. (2h) Design of Pushdown Automata	Same as above	Same as above
L7. (2h) Design of Turing Machines	Same as above	Same as above

Remarks: Students could also choose projects from the list below:

1. Evaluation of arithmetical expressions using two stacks.
2. Generation and evaluation of arithmetical expressions using polish notation
3. Simulation of an DFA
4. Evaluation of regular expressions and construction of an DFA equivalent
5. DFA minimization
6. Conversion to Chomsky normal form
7. Simulation deterministic pushdown automata.

Students who decide to work on a project must announce the lecturer on the chosen topic. The project consists of a program solving the problem as well as documentation. The lecturer must be consulted on what the documentation must contain. Projects are presented to the lecturer.

Recommended bibliography / Bibliografie

[1] Introduction to automata theory, languages and computation - Authors: JE Hopcroft, R Motwani and JD Ullman, Publisher: Addison Wesley/Pearson; 2nd Edition

9. Correlations between the content of the course and the requirements of the IT field / Coroborarea conținuturilor disciplinei cu așteptările reprezentanților comunității epistemice, asociațiilor profesionale și angajatorilor reprezentativi din domeniul aferent programului

The content of the lecture is consistent with the one of similar courses from other universities. It covers the fundamental aspects necessary for the familiarity with issues of formal languages and automata. The content is not very useful for ordinary IT companies, but students can train their algorithmic thinking and programming languages through the proposed projects. Nevertheless, the lecture trains the ability of thinking and problem solving, tasks which are indispensables for a programmer.

10. Evaluation / Evaluare*

Activity / Tip de activitate	10.1. Evaluation criteria / Criterii de evaluare**	10.2. Evaluation methods / Metode de evaluare***	10.3. Weight in the averaged mark / Pondere din nota finală
10.4. Lecture / Curs	Knowledge and application of notions from C1-C4.	Midterm I	20%
	Knowledge and application of notions from C6-C9.	Midterm II	20%
	Knowledge and application of notions from C1-C14.	Written exam in the exam session	30%
10.5. Seminar/ lab	The ability to learn and apply concepts presented during the lectures.	Homeworks and activity (oral examination)	30%
10.6. Projects	The ability to implement an algorithm in a certain programming language for certain notions presented during the lecture as well as its presentation oral and written form.		20%
10.6. Minimal knowledge for passing / Standard minim de performanță			
<p>Minimal knowledge for passing (grade 5):</p> <ul style="list-style-type: none"> Acquiring fundamental understanding of the knowledge of automata theory and formal languages. <p>The final grade is computed as a weighted average of the grades given for the components specified in 10.4 and 10.5. 10.6 contributes to the final grade, however it does not have negative impact on the grade if this activity is not fulfilled. The exam is passed if the average is equal or greater than 5 (not necessary as each note to be greater than 5). At each exam sessions (including reexamination and improvements), the score is computed by the same rule. In the reexamination/improvements session, the written exam and Midterm I-II can all be taken but in the same timeframe if the student wishes to do so.</p> <p><i>Note:</i> Students may attend office hours (2 modules / week according to the schedule set out at the beginning of the semester) where the lecturer (course/seminar) answers questions students and provides further explanations related to course content, applications from seminary themes.</p>
